正信干燥

干燥/混合/粉体计量分装系统

太仓正信干燥设备科技有限公司
TAICANG ZHENGXIN DRYING EQUIPMENT TECHNOLOGY CO.,LTD.

企业简介

太仓正信干燥设备科技有限公司，是一家专业从事干燥设备、粉体计量分装系统、混合设备、聚丙烯环保设备和污泥干化设备的设计、研发、生产、销售的科技企业。企业始终注重于产品的技术革新和完善，并坚持贯彻GMP生产标准。产品广泛应用于医药、化工、食品、轻工、矿产、电子、农药等行业。

我公司地处风景秀丽的江南水乡——江苏省太仓市双凤镇温州工业园区。南接上海，西邻苏州。离上海浦东机场92公里，上海虹桥机场38公里，地理位置优越、交通便捷。

我公司本着技术、诚信、务实的合作宗旨，真诚的与您携手合作。

INTRODUCTION

Taicang zhengxin drying equipment technology co.,ltd. Is a scientific and technological enterprise specializing in the design, research and development, production and sales of drying equipment, metering and loading system, mixing equipment, polypropylene environmental protection equipment and sludge drying equipment. The enterprise pays great attention throughout the product technological innovation and the consummation, and insisted that implements gmp production standard. The product widely applies in professions and so on medicine, chemical industry, food, light industry, minerals, electron, agricultural chemicals. Our company is situated at the beautiful scenery of the south of changjiang river — Wenzhou industrial park, shuangfeng town taicang city jiangsu province. South meets shanghai, west neighbour suzhou. Taicang zhengxin drying equipment technology Compay is 92Km away from Shanghai Pudong International Airport, and 38km away from Shanghai Hongqiao Airport, the geographical position is superior, the transportation is convenient.

Our company in line with the technology, the good faith, the practical cooperation objective, sincere cooperates hand in hand with you.

荣誉证书 CERTIFICATE

我们的荣誉

都是来自企业员工用心血与汗水默默耕耘的见证，
它凝聚了每位员工的智慧与才能；
每一个丰硕的成果，
都是企业辉煌的成就见证，
也为企业指明了通向未来的光芒大道！

Our honor

Come from the hard work and sweat of employees,
witness of work quietly.
Embody the wisdom and talents of each employee.
Each fruitful result.
All is the testimony of company's success.
Also pointed out a bright road to the future of company.

不锈钢双锥回转真空干燥机 STAINLESS STEEL DOUBLE CONE ROTARY VACUUM DRYER

工作原理

本机主机为一只椎形夹层罐体，内胆采用不锈钢，夹层可通入蒸汽或热水，对内胆加温，热量通过内胆胆壁传导至湿物料，物料受热，水份（或有机溶剂）升温汽化，不断被抽气管抽走，罐体内处于真空状态，加快了物料干燥速率。驱动电机带动罐体低速回转，物料不断上下，内外翻动，更换受热面达到均匀干燥目的。

特点

该机构结构紧凑，运转平稳，操作简便，节能高效。可实现无菌操作。内胆可通入高温蒸汽进行灭菌操作，过程方便，迅速可靠。能满足GMP要求，特别适用于增氧、热敏等有特殊干燥要求的粉状物料干燥。系统设置冷凝器受槽后，可回收有机溶剂。

WORK

The local host as a conical sandwich shells, tank made of stainless steel, laminated can be steam or hot water heating on the tank, heat conduction through the wall of gall bladder to the wet material, the material to heat, moisture (or organic solvent) heat of vaporization, constantly being pulled out the exhaust pipe, the body in a vacuum tank to speed up the drying rate. Low-speed rotary drive motor drives the tank, the material continuously from top to bottom, inside and outside turning, replace the heating surface to achieve uniform drying purposes.

FEATURES

The machine structure is compact, smooth, easy operation, energy efficient. Aseptic operation can be realized. Can pass into the inner cylinder temperature steam sterilization, the process convenient, quick and reliable. Can meet the GMP requirements, especially for hate oxygen, thermal and other special drying requirements powder dry. After system setting the condenser slot, could recycle organic solvents.

规格与参数 SPECIFICATIONS AND PARAMETERS

与众不同的抽真空系统，确保容器内无异物产生，满足GMP要求

Unique vacuum system, to ensure that no foreign objects inside the container produced, meet the GMP requirements

选配抽滤板 (烧结网)，可实现双锥干燥机的过滤、洗涤、干燥三合一。

Selection of filter plate(sintering mesh), filter, washing and drying of the double cone dryer can be realized in one.

搪玻璃双锥回转真空干燥机 GLASS-LINED DOUBLE CONE ROTARY VACUUM DRYER

工作原理

本机主机为一只椎形夹层罐体，内胆采用碳钢搪玻璃制成，夹层可通入蒸汽或热水，对内胆加温，热量通过内胆胆壁传导至湿物料，物料受热，水分（或有机溶剂）升温汽化，不断被抽气管抽走，罐体内处于真空状态，加快了物料干燥速率。驱动电机带动罐体低速回转，物料不断上下，内外翻动，更换受热面达到均匀干燥目的。本机针对金属离子有要求的和有腐蚀性的物料干燥。

特点

该机构结构紧凑，运转平稳，操作简便，节能高效。可实现无菌操作。内胆可通入高温蒸汽进行灭菌操作，过程方便，迅速可靠。能满足GMP要求，特别适用于增氧、热敏等有特殊要求的粉状物料干燥。系统设置冷凝器受槽后，可回收有机溶剂。

WORK

The main machine as a conical jacketed tanks, inner tank made of glass-lined carbon steel, jacket can be steam or hot water, heating of the inner tank, the heat transmitted through the wall of inner shell to the wet material, material heated, water (or organic solvent) heat of vaporization, constantly being pulled out by the exhaust pipe, the tank body in a vacuum condition to speed up the drying rate. Low-speed rotary drive motor drives the tank, the material continuously from top to bottom, inside and outside turning, replace the heating surface to achieve uniform drying purposes. The machine is made for the dry requirements of metal ions and corrosive materials.

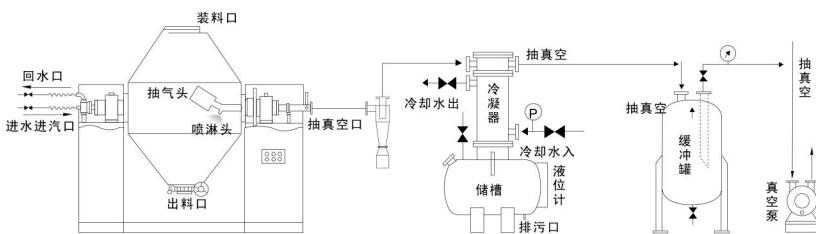

FEATURES

The machine structure is compact, smooth, easy operation, energy efficient. Aseptic operation can be realized. Can pass into the inner cylinder temperature steam sterilization, the process convenient, quick and reliable. Can meet the GMP requirements, especially for hate oxygen, thermal and other special drying requirements powder dry. After setting the condenser by the slot system, recyclable organic solvents.

单锥系列真空干燥机 SINGLE CONE SERIES VACUUM DRYER

产品简介

单锥系列真空干燥机是一种集干燥、混合为一体的多功能全密闭的真空干燥设备。主要用于抗生素、原料药、抗生素、精细化工等对卫生级别要求高的粉体干燥。设备设计功能符合最新GMP及FDA标准要求，与洗涤过滤干燥一体机（三合一）或离心机构成一体化自动过滤干燥系统。

产品优点

兼容性广：由于该设备整体是静止固定的，上道工序可直接与离心机或三合一对接，下道工序可直接与整粒粉碎机、分装机等连接，形成全自动化无菌生产线。
热效率高：锥体设计，搅拌部件可换热，使其换热面积大幅度提升，螺带提升搅拌后物料受热均匀。保证了较高的干燥效率。
在线清洗灭菌：配备了CIP清洗、SIP在线灭菌系统，可短时间内实现不同物料的生产转换。
处理能力：物料填装比可达到70%以上。
出料顺畅：出料、取样、卸料顺畅无残留。

INTRODUCTION

Single Cone Vacuum Dryer Series is a set of drying, mixing multifunctional fully enclosed vacuum drying equipment. Mainly for antibiotics, bulk drugs, antibiotics, fine chemicals and other high-level requirements for health powder dry. Equipment design features to meet the latest requirements of GMP and FDA standards, and wash the filter drying machine (triple) or centrifuge filtration and drying systems constitute automatic integration.

ADVANTAGES

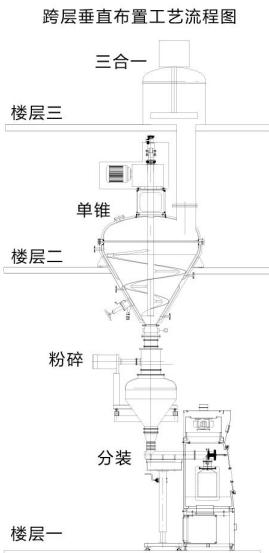

Wide compatibility: Since the device as a whole is still fixed on the procedure directly with centrifuges or triple docking, the next process can be directly connected with the whole mill, dispensing machines, etc., to form a fully automated aseptic production line.
High thermal efficiency: cone design, mixing components can heat to greatly enhance the heat transfer area, ribbon enhance stirring material is heated evenly. Ensure a high drying efficiency.
Online Cleaning Sterilization: equipped with CIP cleaning, SIP sterilization system online, enabling production of different materials in a short time to convert.
Capacity: material filling ratio can reach more than 70%.
Smooth the material: the material, sampling, unloading smooth no residue.

部件功能表 PARTS MENU

型号 Model	容积 (L) Volume(L)	装料系数 (%) Charge coefficient(%)	高度 (mm) Height(mm)

VD3000	3000	50%-80%	4200

工艺流程图 FLOW CHART

耙式真空干燥机 RAKE TYPE VACUUM DRYER

工作原理

被干燥物料从壳体上方投料加入，在不断转动的耙齿的搅拌下，物料与壳壁接触时，表面不断更新。被干燥物料受到蒸汽（热水、导热油）的间接加热，在耙齿的均匀搅拌、粉碎棒的粉碎下，物料内的溶剂快速汽化，经干式除尘器、湿式除尘器、冷凝器、真空泵排出放空。

特点

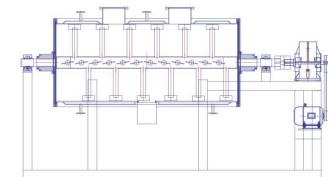

- 1.适应性强，干燥速度快。由于耙式干燥机利于夹套加热，高真空排气，所以几乎对所有不同性质、不同状态物料都适用，特别适用于易氧化、易爆、剧毒类、泥浆状、膏状、粉状物料。
- 2.设备结构简单，占地小，操作简单，能耗低。
- 3.干燥过程中耙齿不断转动，物料干燥均匀。
- 4.干燥质量高，干燥后物料含湿量达到0.5%-1%，由于耙齿在干燥过程中不断搅拌，成品为粉末状，干燥完毕后直接包装，无需粉碎。
- 5.设备故障率低，生产效率高。

WORK

The material is fed from the top of the shell, in the continuous rotation of the tooth under stirring, the material and shell wall contact constantly updated. The material is indirectly heated by steam (hot water, heat transfer oil), in the stirring tooth and Crush the rod. Rapid gasification of solvent in materials, the dry dust collector and wet dust collector, a condenser, a vacuum pump exhaust vent.

FEATURES

- 1.Strong adaptability, fast drying. Due to the jacket heating dryer, high vacuum exhaust, so apply to almost even in different materials, especially suitable for easy oxidation, explosive, toxic, slurry, paste, powder material.
- 2.The equipment has the advantages of simple structure, small occupation area, simple operation and low energy consumption.
- 3.Then the continuous rotation of 3 in the process of drying, drying uniformity.
- 4.high drying quality, after drying the moisture content reaches 0.5%-1%, the tooth stirring continuously during the drying process, the finished product is powder, drying after direct packaging, without crushing.
- 5.The equipment failure rate is low, high production efficiency.

卧式振动真空干燥机 HORIZONTAL VIBRATING VACUUM DRYER

工作原理

本机主要依靠来自容器底部的激振器产生的机械激振力。使容器产生周期性的震动。使容器内的物料达到流化状态。物料与夹套加热的容器内壁接触传热升温，达到汽化点后在真空下水份汽化外排，使物料快速脱水干燥。

特点

物料呈流化状态，传热效果好，干燥均匀，速率提高，有明显节能效果。可实现无菌操作。内筒可通入高温蒸汽进行灭菌操作，过程方便，迅速、可靠。可真空调吸，振动送料，并可借助机械振动力使物料边干燥边破碎，操作简便、省力。真空干燥满足GMP要求，尤适用于热敏性物料干燥。系统设置冷凝器受槽后，可回收有机溶剂。

WORK

The machine is mainly relying on the bottom of the shaker container produced from the mechanical exciting force. Periodically shake the container produced. To achieve the flow of material within the container of state. Materials and jacketed heating vessel wall contact heat transfer heat up to vaporization point of water vaporization in the vacuum outside the row, so that the material quickly dehydrated.

FEATURES

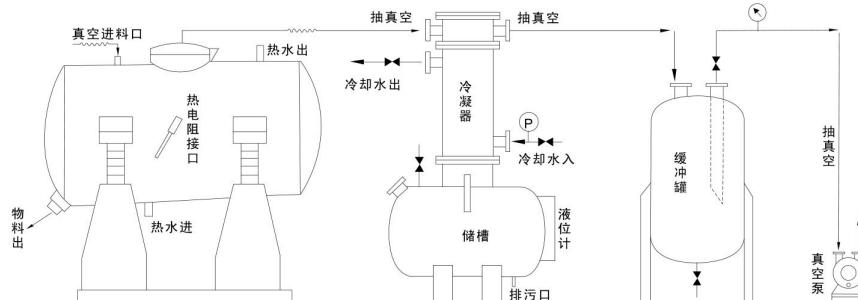

Material was fluidized state, heat transfer is good, even drying rate increased, with a clear energy saving effect. Aseptic operation can be realized. Can pass into the inner cylinder temperature steam sterilization, the process convenient, quick and reliable. Can vacuum suction, vibration, discharge, and materials by mechanical vibration force of the broken edge of drying side, simple, and effort. Vacuum drying to meet the GMP requirements, especially suitable for drying heat sensitive materials. After setting the condenser by the slot system, recyclable organic solvents.

全套装置图 COMPLETE INSTALLATION PLAN

立式振动真空干燥机 VERTICAL VIBRATING VACUUM DRYER

工作原理

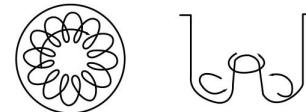

本机主要依靠来自容器底部的激振器产生的机械激振力。使容器产生周期性的震动。由于容器内底部为以圆柱形状，各点的振幅不一，使容器内的物料围绕容器中心轴线公转，又绕圆柱中心翻滚，合成环形螺旋运动，从而达到流化状态。物料与夹套加热的容器内壁接触传热升温，达到汽化点后在真空下水份汽化外排，使物料快速脱水干燥。

WORK

The machine is mainly relying on the bottom of the shaker container produced from the mechanical exciting force. Periodically shake the container produced. The bottom of container to be the cylindrical shape, the amplitude of each point is different, so that the material inside the container revolution around the central axis of the container, and rolling around the cylinder center, synthesis of circular spiral motion, to achieve the flow state. Materials and jacketed heating vessel wall contact heat transfer, heat up to vaporization point of water vaporization in the vacuum outside the row, so that the material quickly dehydrated.

FZG(方形)真空干燥箱 FZG(SQUARE VACUUM DRYER)

工作原理

- 1.FZG (方形) 真空干燥箱属于静态式真空干燥机。物料在静态入干燥器内干燥时，物料处于静止状态，形体不会损坏，干燥前还可进行消毒处理。
- 2.真空状态下物料溶剂的沸点降低，适用于干燥不稳定或热敏性物料；真空干燥机有良好的密封性，所以又适用于干燥需要回收溶剂和含强烈刺激、有毒气体的物料。

适用范围

广泛应用于制药、化工、食品、染料等行业，符合GMP要求。

WORKING

Model FZG square drier belongs to static drier. When raw material is dried in static drier, raw material is in static state and its shape can not be destroyed. Before drying, it can carry out the treatment of disinfection. When raw material is dried in dynamic drier, raw material is turned over ceaselessly. So it can be dried better and more uniformly.

SCOPE

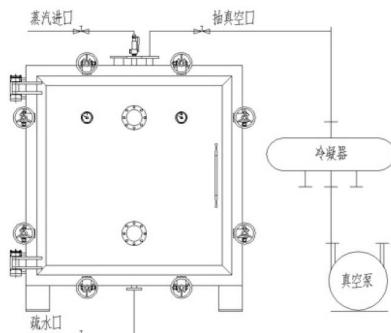

Widely used for pharmaceutical industry, chemical industry, foodstuff industry, dyestuff industry and so on. Conformity with the requirement of GMP.

V型混合机 V-MIXER

工作原理及特点

- 1、本机结合国内外同类产品优点，采用真空吸料和蝶阀出料，实行无尘操作。
2、V型不对称混合筒体结构新颖，物料具有独特的四方向混和运动轨迹，较一般V型混合效果好，混合精度高，速度快。

适用范围

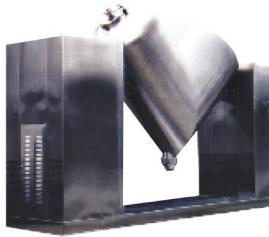

本机适用于制药、化工、食品、冶金、电子、塑料、陶瓷、饲料等行业的干粉或颗粒状物料的混合。

WORKING PRINCIPLES AND CHARACTERISTICS

- 1, the machine combines the advantages of similar products at home and abroad, the use of vacuum suction and discharge valve, the implementation of dust-free operation.
2, V-type novel asymmetric hybrid tube structure, the direction of the material has a unique blend of four trajectory instead of the usual V-mixing is good, mix of high precision and speed.

SCOPE

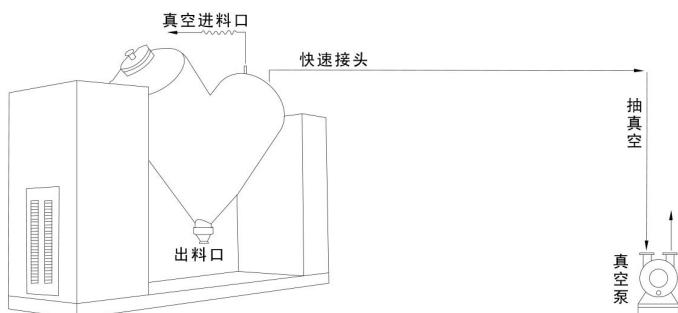

This machine is suitable for pharmaceutical, chemical, food, metallurgy, electronics, plastics, ceramics, feed and other industries powder or granular material mixed.

不锈钢双锥型混合机 STAINLESS STEEL DOUBLE CONE TYPE MIXER

工作原理及特点

- 1、本机结合国内外同类产品优点，采用真空吸料和蝶阀出料，实行无尘操作。
2、双锥形混合筒体结构新颖，物料具有独特的四方向混合运动轨迹，较一般混合机 效果好，混和精度高，速度快，容积大。

适用范围

本机适用于制药、化工、食品、冶金、电子、塑料、陶瓷、饲料等行业的干粉或颗粒状物料的混合。

WORKING PRINCIPLES AND CHARACTERISTICS

- 1, the machine combines the advantages of similar products at home and abroad, the use of vacuum suction and discharge valve, the implementation of dust-free operation.
2, double-cone mixed-cylinder structure is new, the material has a unique four-direction mixture of motion trajectories, a better mixed effect than ordinary mixer, high mixing precision, high speed, large volume.

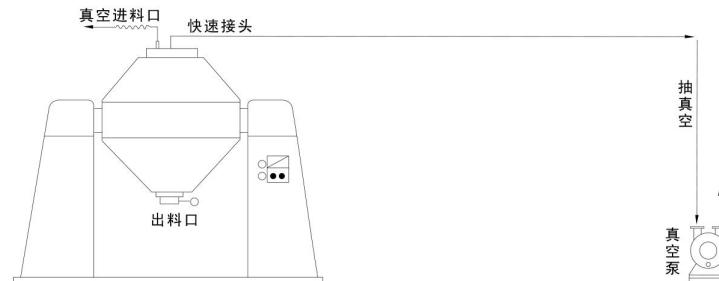

SCOPE

This machine is suitable for pharmaceutical, chemical, food, metallurgy, electronics, plastics, ceramics, feed and other industries powder or granular material mixed.

全套装置图 COMPLETE INSTALLATION PLAN

粉体计量分装系统 POWDER METROLOGICAL PACKING SYSTEM

工作原理

本系统由干燥系统、筛分系统、粉碎系统、计量分装系统、PLC控制系统组成。系统采用真空泵所产生的负压实现了物料在双锥干燥完成之后的转移、筛分、粉碎、计量分装等工序的连续生产。杜绝了粉尘对工作环境、周边环境和操作人员带来的污染和伤害。符合GMP要求，适用于制药、食品、化工、电池等行业。

特点

该系统主要用于工业自动化的称重配料，它对粉状、散粒状物料进行连续输送、精确计量、自动配料，能够实现多种物料的精确配比混合加料，为生产节省大量的劳动力。

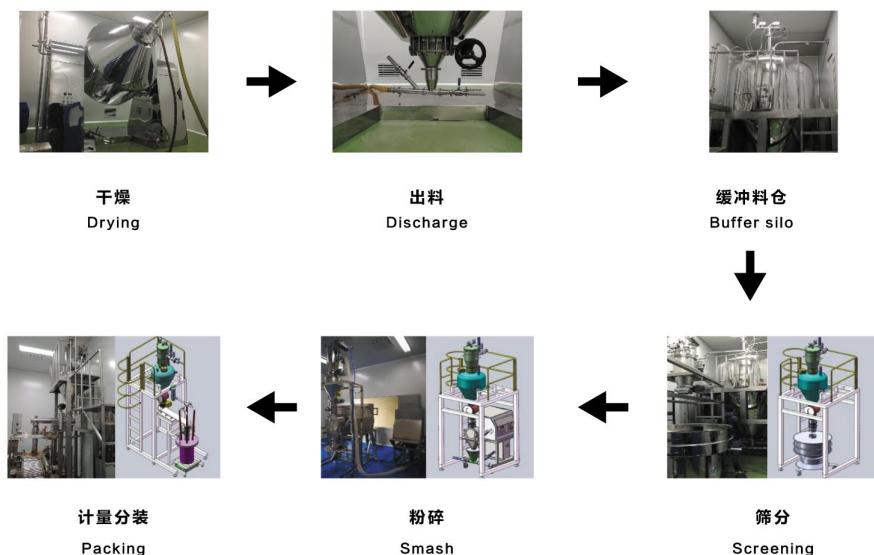

WORK

The system consists of drying system, screening system, crushing system, metering and loading system, and PLC control system. The negative pressure produced by vacuum pump is used in the system to realize the continuous production of material transfer, screening, crushing, metering and packing after the completion of double cone drying. Dust pollution and damage to working environment, surrounding environment and operators are eliminated. It meets GMP requirements and is suitable for pharmaceutical, food, chemical, battery and other industries.

FEATURES

The system is mainly used for weighing and proportioning of industrial automation. It carries out continuous transportation, accurate measurement and automatic proportioning of powder and granular materials. It can realize the accurate proportioning and mixing of various materials and save a lot of labor for production.

全自动无菌提升混合机 AUTOMATIC ASEPTIC ENHANCE MIXER

工作原理

全自动无菌提升混合机是我们在吸收消化西欧国家先进技术的基础上，自行开发研制而成的。该机设计合理、结构紧凑、运行稳定、物料混合均匀度高、操作简便，符合制药业“GMP”规范，完全能满足固体制剂密闭生产工艺流程，是固体粉粒状物料混合的理想设备。

全自动无菌提升混合机由混合料桶、提升回转机构、程序控制系统三大部份组成。在混合料桶内配备不锈钢无动力导流板，使物料在混合料桶旋转时形成多维运动状态，确保物料混合的均匀性。

功能与特点

- 1、该机能同时适用四种不同容积规格的混合料桶，满足大批量、多品种的生产需求，达到一机多用，还可与其他分体处理设备配套使用。
- 2、该机采用PLC程序控制，触摸屏操作显示，变频调速，能自动完成混合的全部程序，并具有人机界面及生产数据储存打印功能。
- 3、该机采用机械传动方式，避免了由液压做传动而引起的漏油及由此导致的环境污染和药品质量问题。
- 4、该机混合料桶可卸，使物料在生产过程中不需要频繁转料，从而防止了料尘飞扬和交叉污染，优化了物料转运工序，清洗方便，配合SIP/CIP清洗站，可以在线清洗和灭菌。
- 5、该机设置了双道红外线探测器、声光报警安全装置及减震装置，操作简便、运行稳定。
- 6、料筒容积、混合转速、提升高度、偏转角度可根据客户需求定制。
- 7、在特殊区域可做穿墙布置。

WORKS

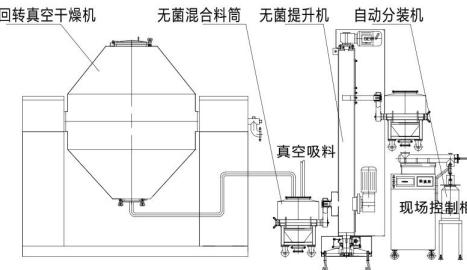

Automatic aseptic improve mixing machine is in the digestion and absorption of advanced technology on the basis of Western European countries, developed into a. This machine is reasonable in design, compact structure, stable operation, material mixing uniformity, simple operation, in accordance with the pharmaceutical industry "GMP" specification, can fully meet the solid preparation of closed production process, is the ideal equipment for granular materials mixed solid powder.

Automatic aseptic improve mixing machine is composed of the material mixing barrel, lifting rotary mechanism, procedure control system three parts. In the material mixing barrel is equipped with stainless steel without power diversion plate, so that the material forming the multi-dimensional movement barrel rotation when mixed, to ensure the uniformity of mixed materials.

FUNCTIONS AND FEATURES

- 1, the function at the same time for four different volume specifications, satisfy the mass, the variety of production needs, to achieve a multi-purpose machine, also can with other processing equipment supporting the use of.
- 2, the machine adopts PLC control, touch screen display, frequency control, can automatically complete the program mixed, and a man-machine interface and data storage function of printing production.
- 3, the machine adopts mechanical drive way, avoid by hydraulic transmission caused by the oil spill and the resulting environmental pollution and drug quality problems.
- 4, the mixing barrel can be disassembled, so that the material in the production process does not need frequent transfer material, from the surface to prevent the material dust and cross contamination, optimize the material handling process, convenient cleaning, with SIP/CIP cleaning stations, online cleaning and sterilization.
- 5, the machine is provided with double channel infrared detectors, sound and light alarm safety device and a damping device, easy operation, stable operation.
- 6, volume of barrel, mixing speed, height, angle of deflection can be customized according to customer demand.
- 7, in the special area can be arranged through the wall.

工艺流程图 FLOW CHART

ZSL 真空上料机 ZSL VACUUM APPENDING MACHINE

工作原理

启动后，压缩空气进入真空发生器，同时料斗的放料门关闭，料斗中产生真空。通过真空气流的作用，被输送的物料经软管被输送到真空料斗中，同时料斗的放料门在气缸的推动下开启，物料从放料门自动放入受料设备中。同时，储存在气包中的压缩空气反吹过滤器，过滤器自动清洗，周而复始，物料被源源不断地送入受料设备中。

适用范围

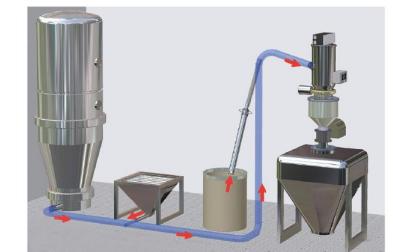

气动式真空上料机是利用压缩空气通过真空发生器产生高真空实现对物料的输送，不需要机械式真空泵，减轻了工人的劳动强度，杜绝了粉尘污染。该机具有结构简单、体积小、免维修、噪音低、控制方便、消除物料静电和符合GMP要求等特点。真空发生器产生的高真空，使被输送的物料杜绝了分层现象，保证了混合成分的均一性，是粉碎机、筛分机、混合机、干法制粒机、压片机、胶囊填充机、包装机等机械自动上料的首选设备。

WORKING

After start-up, compressed air getting into the vacuum generator, at the same time, the discharge door of hopper is closed, and the hopper becomes vacuum. Through the vacuum airflow, the conveyed material by the hose is transported to the vacuum hopper, concurrently the hopper discharge door is opening under the promoting of the air cylinder, the material from the discharge door automatically into the receiving equipment, and the compressed air stored in the air bag back flush filter, the filter is cleaning itself automatically, running in cycle, the material is set into the receiving equipment constantly.

PRINCIPLE

Pneumatic vacuum feeding machine is using compressed air via the vacuum generator producing high vacuum to realize the transport of the material, don't need a mechanical vacuum pump. The machine can reduce the labor intensity of the workers, and prevent dust pollution. The machine has the characteristics of simple structure, small volume, free repair, low noise, convenient control, eliminating the static electricity of materials and meeting the requirements of GMP. High vacuum generator make the conveyed material eliminate the stratification phenomenon, and ensure the uniformity of mixture components. It is the first selection of automatic feeding device, such as grinder machine, screening machine, mixing machine, dry granulator, tablet press, capsule filling machine, packing machine and so on.

污泥低温带式干化机 THE LOW-TEMPERATURE BELT DRIERS

工作原理

利用除湿热泵对污泥采用热风循环的方式烘干；
热泵干化中只需要输入1kW电功率，可获得3~5kW传统干化加热功率。
除湿热泵：是利用热泵原理回收水蒸气潜热和空气显热，再加热空气的一种装置。
除湿热泵=除湿(冷凝去湿)+热泵(能量回收)

技术特点

高效 减重80%/减容67%
一步到位：可直接将83%含水率污泥干化至10%，无需分段处置
干化彻底：可得到10%含水率污泥。
节能 1度电可除水3~4Kg
采用热泵热回收技术，密闭式干化模式无废热排放；
安全 低温(低粉尘)无摩擦
80℃以下低温干化；
静态堆放，与接触面无机械静电摩擦；
干料为颗粒状，无粉尘危险；
出料温度低(<50℃)，无需冷却，直接储存。
环保 无废气\无二次污染
密闭循环干化，无排风，无臭气外溢；
采用低温干化，H2S、NH3析出量大大减少；
冷凝水(污泥水份)处置简单。

WORKING PRINCIPLES

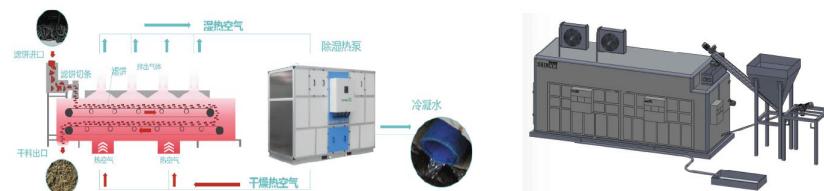

Use desiccant heat pump on the sludge with the method of hot air circulation drying;
In the heat pump drying need only enter 1 kw electric power, can obtain 3 ~ 5 kw traditional dry heating power.
Desiccant heat pump: is the use of refrigeration system to make hot and humid air cooling dehumidifying, at the same time, through the principle of heat pump back to water vapor latent heat and sensible heat air, a device of heating air again.
Desiccant heat pump (condensation dehumidification) + = dehumidification heat pump (energy recovery)

WORKING CHARACTERIS

Effective weight loss 80% / allow 67% reduction
One pass reaches the designated position, can be directly to 83% moisture content of sludge drying to 10%, without block disposal
Can get 10% moisture content of sludge drying thoroughly:
1 KWH energy saving can be in addition to water 3 ~ 4 kg
Using heat pump heat recovery technology, closed drying mode without waste heat discharge;
Safety, low dust, no friction at low temperature
Low temperature drying under 80 °C;
Static stall, with no mechanical contact static friction;
Dry for granular, no dust danger;
Discharging temperature is low (< 50 °C) without cooling, storage directly.
No gas, no secondary pollution of environmental protection
Closed loop dry, no wind, no odor spillover;
Using low temperature drying, H2S, NH3 precipitation quantity greatly reduced;
Condensate (sludge moisture) simple disposal.

结构特点及应用范围

设备采用聚丙烯全塑制造，广泛应用于化工、医药、石油等行
业生产过程中的尾气，废气等吸收和净化处理，达标排放。

使用条件及安装要求

设备使用应符合材料使用条件，工作温度-5℃~80℃。安装
应紧固设备底脚螺栓，必要时安装防风钢绳。

STRUCTURAL FEATURES AND APPLICATIONS

Polypropylene plastic manufacturing equipment, widely used in chemical, pharmaceutical, oil and other industries in the process of gas production, gas and other absorption and purification, emissions standards.

TERMS OF USE AND INSTALLATION REQUIREMENTS

Equipment shall comply with the material conditions, working temperature -5℃ ~ 80℃. Installation should be the end of bolt tightening equipment
necessary to install wind rope.

立式水膜除尘器 VERTICAL WATER FILM DUST

结构特点及用途

设备特点：采用聚丙烯制造，广泛应用于化工、医药、石油、农药、机械加工等
行业生产过程中的尾气、废气等吸收和净化处理，达标排放。

用途：湿式除尘器可以有效地将直径为 $0.1\text{--}20\mu\text{m}$ 的液态或固态粒子从气流中
除去。同时，也能脱除部分气态污染物。具有设备投资少、结构比较简单、除尘
效率较高。设备本身一般无活动部件，操作及维修方便、占地面积少等优点。能
够同时进行有害气体的净化、烟气的降温冷却和增湿，特别适用于处理高湿和有
易燃可能性的气体。此外，在操作时能有效地防止粉尘的二次扬尘。

使用温度： $-5\text{--}80^\circ\text{C}$ 工作温度。

使用条件：

适用于非纤维性的、能受冷且与水不发生化学反应的含尘气体，不适用处理粘性
较大的粉尘，含有憎水性和水硬性粉尘的气体。

STRUCTURAL CHARACTERISTICS AND USES

Features: the use of polypropylene, widely used in chemical, pharmaceutical, petroleum, and
other industries in the production process exhaust, exhaust and other absorption and
purification treatment, discharge standards.

Uses: Wet dust can effectively be of a diameter of $0.1\text{--}20\mu\text{m}$ removing liquid or solid
particles from the gas stream. While also removing some of gaseous pollutants. With less
investment in equipment, the structure is relatively simple, high collection efficiency. The
device itself is generally no easy moving parts, operation and maintenance, small footprint
and so on. Capable of cleaning a harmful gas, while cooling and humidifying the flue gas
cooling, humidity and particularly suitable for handling the possibility of flammable gas.
Further, when the operation can effectively prevent the secondary dust dust.

Conditions of use:

Temperature: $-5\text{--}80^\circ\text{C}$ operating temperature.

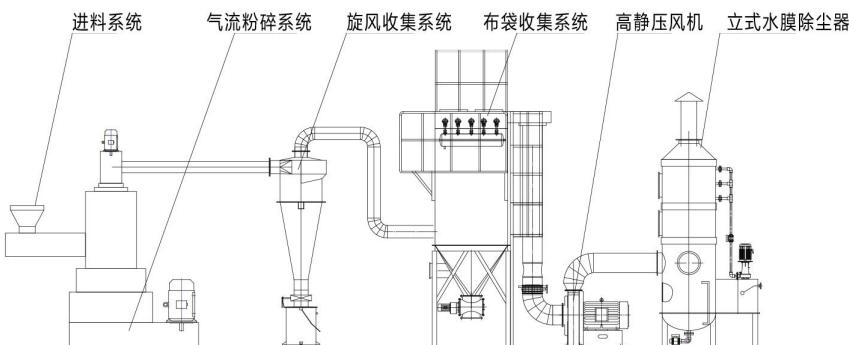

For non-fibrous, can be affected by dust and gas cooler does not react with water, the NA of
the dust handling viscous, hard water containing hydrophobic dust and gas.

4、控制系统的操作要求。

立式水喷射真空机组（环保型） VERTICAL WATER JET VACUUM UNIT (ENVIRONMENTAL PROTECTION)

设备特点

环保型水喷射真空机组具有机械强度高、耐腐蚀性能强、结构简单、体积小效率高等特点。在同类型产品中，使用寿命长、排气量大、真空度高、设备更稳定。

五大特点：

- 1.抽入的气体先进入石墨列管冷凝器，可对被抽介质进行冷凝，减少机组的抽气负荷。
- 2.循环液经过石墨盘管冷却后，能保持在适宜的温度下运行，保障设备的使用性能到达最佳状态。
- 3.设备大大降低了循环水箱对补水的要求，基本能做到无废水排放。
- 4.直筒的废气经除沫器后，液体回到循环储液罐，废气进入处理系统。
- 5.冷凝列管和冷却盘管均采用聚丙烯改性石墨管，离心泵为全塑聚丙烯材质，具有优良的耐腐蚀性能。

应用

广泛应用于化工、制药、食品、环保等行业，主要应用在真空吸收、真空过滤、真空浓缩、真空干燥、真空输送、真空除氧等工艺。

Equipment characteristics

The environment-friendly water jet vacuum unit has the characteristics of high mechanical strength, strong corrosion resistance, simple structure, small volume and high efficiency. In the same type of products, the service life is long, the exhaust volume is large, the vacuum degree is high, and the equipment is more stable.

Five characteristics:

1. The exhausted gas enters the graphite tube condenser first, which can condense the extracted medium and reduce the exhaust load of the unit.
2. After cooling by graphite coil, the circulating liquid can keep running at the appropriate temperature to ensure the best performance of the equipment.
3. The equipment greatly reduces the requirement of the circulating water tank for water replenishment, and basically can achieve no wastewater discharge.
4. After the exhausted gas passes through the demister, the liquid returns to the circulating tank and the exhausted gas enters the treatment system.
5. Polypropylene modified graphite pipes are used in condensing tube and cooling coil. Centrifugal pump is made of all-plastic polypropylene material, which has excellent corrosion resistance.

Application

It is widely used in chemical, pharmaceutical, food, environmental protection and other industries. It is mainly used in vacuum absorption, vacuum filtration, vacuum concentration, vacuum drying, vacuum transportation, vacuum deoxidation and other processes.

DF系列真空机组 DF SERIES VACUUM UNIT

设备特点

DF型系列真空机组，采用防腐PP水箱，缓冲罐，RPP水冲泵，RPP水泵，止回阀，蒸汽水喷射泵，罗茨真空泵组成各系列机组，结构紧凑，能耗低，真空高，可移动。

使用注意事项

- 1.设备应安装在平整坚实的基础上，保证设备的稳固强度。
- 2.开机前水箱灌满水，打开水泵进水阀门。水泵严禁脱水空转及反转，以防损坏水泵。
- 3.汽水串联机组应先启动水泵，水喷射真空开始工作，然后打开蒸汽开关，蒸汽泵开始工作。罗茨水喷射机组应先启动水泵，水喷射真空开始工作，真空度到-0.092Mpa时，才能启动罗茨真空泵，低于真空-0.092Mpa，应立即停止罗茨真空泵工作，建议安装设备控制电器开关，便于操作。
- 4.使用时循环水箱应经常补充冷却水更换循环水，降低工作水温，严防循环水中有颗粒杂质。
- 5.设备停机时应先关闭蒸汽阀门，停止罗茨真空泵，打开真空罐上放空阀门，降低真空度。然后停止工作。否则产生倒吸及损坏设备。

FEATURES

DF series vacuum unit, the use of anti-corrosion PP tanks, buffer tanks, RPP water will pump, RPP pump, check valve, steam water jet pump died, the composition of the series Roots vacuum pump unit, compact, low energy consumption, high vacuum, removable.

CAUTION

1. equipment should be installed in the formation of a solid basis, to ensure that the equipment works heavy intensity.
2. water tank filled with water before starting, open the pump inlet valve. Water pump with dehydration is strictly prohibited and reverse idling pumps to prevent damage to the pump.
3. soft drinks series machine unit should start the pump firstly, water jet vacuum start to work, and then open the steam switch, the steam pump to work. Roots water jet unit should start the water pump, water jet vacuum start to work, after vacuum degree up to -0.092mpa, then to start the root vacuum pump, lower than the vacuum -0.092mpa, roots vacuum pump shall immediately stop work, suggest to install the electrical equipment control switch, easy to operate.
4. when using recycled water tank, should often add cooling water to replace recycled water regularly, reducing the working temperature of water, to prevent circulating water have particle impurities.
5. when stop the equipment, should first close the steam valve, stop the roots vacuum pump, open the vacuum tank venting valve, lower vacuum. And then stop working. Otherwise, inverted.Suck happened and damage the device.

材质特点

- (1) 聚丙烯具有优良的耐化学品性，对于无机化合物，不论酸、碱、盐溶液，除强氧化性物料外，几乎直到100℃都对其无破坏作用，对几乎所有溶剂在室温下均不溶解，一般烷、烃、醇、醚、酮类等介质上均可使用。
- (2) 聚丙烯塑料融点为164~174℃，因此一般使用温度可达90~100℃。
- (3) 不结垢，不污染介质，无毒性，也可用于食品工业。
- (4) 材质比重轻设备安装维修极为方便。

由于具有以上特点，所以本设备适合于化工、制药、染化、冶金，食品、环保、化纤等行业中做各种用途的换热设备及容器代替了原有的不锈钢、搪瓷；石墨、碳钢、玻璃等设备，使用后效果显著，已受到广大用户的欢迎。

MATERIAL FEATURES

- (1) Polypropylene has excellent chemical resistance, for inorganic compounds, regardless of acid, alkali, salt solution, in addition to strong oxidizing materials, almost all of its 100 °C until no detrimental effect on almost all solvents at room temperature Not dissolved, the general alkanes, hydrocarbons, alcohols, aldehydes, ketones and other media can be used.
- (2) polypropylene plastic melting point 164~174 °C, it is generally temperature up to 90~100 °C.
- (3) does not scale, do not pollute the media, non-toxic, can also be used in food industry.
- (4) Material of light weight equipment installation and maintenance is very convenient.
- Because of the above characteristics, so the equipment is suitable for chemical, pharmaceutical, dye, metallurgy, food, environmental, chemical and other industries to do a variety of purposes of heat transfer equipment and containers instead of the original stainless steel, enamel; graphite, carbon Steel, glass and other equipment after use, significant effect, has been welcomed by customers.

石墨改性聚丙烯列管式换热器、冷凝器 GRAPHITE MODIFIED POLYPROPYLENE TUBE HEAT EXCHANGER, CONDENSER

注意事项

1. 订货时，请查阅聚丙烯的腐蚀数据，针对介质和使用条件选购。
2. 每台换热器规格面积由客户确定，规格请参考换热器规格表。
3. 订货时要指明安装形式，如改变管接口大小及方位请客户提前指出。
4. 塑料设备较脆，要轻拿轻放，安装时要慢慢紧固螺栓，以免损坏设备。
5. 开机时先注入冷却水，应避免与明火接触。

NOTES

1. When ordering, please refer to the corrosion of PP data, and conditions of use for the media buy.
2. Each area of heat exchanger specifications determined by the customer, specifications refer to specification sheet heat exchanger.
3. Installation should be specified when ordering forms, such as changing the size and position of the nipple that you the customer in advance.
4. More brittle plastics equipment to gently, slowly tighten the bolts to be installed to avoid damage to equipment.
5. Before driving into the cooling water, should avoid contact with open flame contact.

聚丙烯真空缓冲罐、计量罐、高位槽

POLYPROPYLENE VACUUM BUFFER, METERING TANK, HIGH GROOVE

立式

挂式

本公司生产的PP、塑料立式、卧式真空计量罐、高位槽，主要适用于化工、医药、石油等生产工艺中物料的贮存计量，他具有重量轻、按装维修方便等优点。

其操作压力：-0.1MPa，操作温度PP-5℃~100℃。

The field of production of PP, PVC plastic vertical, horizontal vacuum metering tank, elevated tank, mainly for chemical, pharmaceutical, oil and other industries of material production and storage of process measurement, he has a light weight, installation maintenance repair easy and so on. its operating pressure: -0.1MPa, operating temperature of PP-5℃~100℃.

聚丙烯离子交换柱 PP ION EXCHANGE COLUMN

离子交换柱主要是利用离子交换树脂中的离子同原水(液体)中的某些离子进行交换而将其除去,使水(液体)得到净化的方法。

它已广泛应用于化工、电子、医药、纺织、电镀行业等制取纯水、硬水软化、药物和食品的脱色和提取、重要化工原料的回收以及污水处理等。聚丙烯离子交换器(柱)技术参数及外形尺寸:

Ion exchange column ion-exchange resins are mainly used in the homologous ion water (liquid) in some of the ion exchange to remove, so that water (liquid) by purification methods.

It has been widely used in chemical, electronic, pharmaceutical, textile, electroplating industry, etc. Preparation of pure water, water softening, bleaching of drug and food and extraction of important chemical raw materials, recycling and sewage treatment. PP ion exchanger (column) Technical data and dimensions:

设备使用特点

聚丙烯降膜吸收器 POLYPROPYLENE FALLING FILM ABSORBER

用 途：主要用于生产盐酸，氢氟酸等，也可用于副产氯化氢、二氧化硫气体等各种废气、尾气的吸收。

特 点：吸收效率高、耐腐蚀、不结垢、重量轻、使用寿命长、维修方便等优点，是一种新型的气体吸收设备。

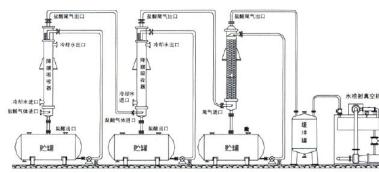

工作温度：-5℃~100℃；

工作介质：参照聚丙烯耐腐蚀特性；

工作压力：正压：≤0.3MPa 负压：≤0.1MPa

出产水压强度：0.4MPa (壳程)

注意事项：(1) 吸收器上部内有溢流分布装置，按装时保证垂直度，流体流量要控制在每根吸收管内壁有2mm水膜。
(2) 管道安装应保证气体的通畅。
